ON COVER—A view of the Pic du Queyrón showing the “Grés du Champsaur,” the famous feldspathic turbidite sandstones of Hautes-Alpes (France), overlying a folded calc-schist sequence of early Priabonian. Photo by William Sassi. This outcrop belongs to the western Alps though it is located farther to the southeast of the area studied in the article by Éric Deville and William Sassi beginning on p. 887 of this issue of the Bulletin.
