# Bulletin of the Seismological Society of America

Volume 100 • Number 2 • April 2010

## Contents

© indicates that online material is available in the electronic edition of BSSA

### Articles

- **Earthquake Monitoring in Southern California for Seventy-Seven Years (1932–2008)**  
  *Kate Hutton, Jochen Woessner, and Egill Hauksson*  
  423

- **Non-Double-Couple Earthquake Mechanism as an Artifact of the Point-Source Approach Applied to a Finite-Extent Focus**  
  *Petra Adamová and Jan Šílený*  
  447

- **Evidence for Near-Horizontal Tensile Faulting at the Base of Gornergletscher, a Swiss Alpine Glacier**  
  *Fabian Walter, Douglas S. Dreger, John F. Clinton, Nicholas Deichmann, and Martin Funk*  
  458 ©

- **Slip-Length Scaling Law for Strike-Slip Multiple Segment Earthquakes Based on Dynamic Rupture Simulations**  
  *Yuko Kase*  
  473

- **Physics-Based Earthquake Source Characterization and Modeling with Geostatistics**  
  *Seok Goo Song and Paul Somerville*  
  482

- **On Possible Plume-Guided Seismic Waves**  
  *Bruce R. Julian and John R. Evans*  
  497

- **Precursory Rise of P-Wave Attenuation before the 2004 Parkfield Earthquake**  
  *K.-Y. Chun, Q.-Y. Yuan, and G. A. Henderson*  
  509

- **Triggering Effect of M 4–5 Earthquakes on the Earthquake Cycle of Repeating Events at Parkfield, California**  
  *Kate Huihsuan Chen, Roland Bürgmann, and Robert M. Nadeau*  
  522 ©

- **Localized Surface Disruptions Observed by InSAR during Strong Earthquakes in Java and Hawai’i**  
  *Michael Poland*  
  532

- **Five Short Historical Earthquake Surface Ruptures near the Silk Road, Gansu Province, China**  
  *Xiwei Xu, Robert S. Yeats, and Guihua Yu*  
  541

- **A Catalog of Felt Intensity Data for 570 Earthquakes in India from 1636 to 2009**  
  *Stacey Martin and Walter Szeliga*  
  562 ©

- **Intensity, Magnitude, Location, and Attenuation in India for Felt Earthquakes since 1762**  
  *Walter Szeliga, Susan Hough, Stacey Martin, and Roger Bilham*  
  570 ©
Application of Rotational Sensors to Correcting Rotation-Induced Effects on Accelerometers
Chin-Jen Lin, Han-Pang Huang, Chun-Chi Liu, and Hung-Chie Chiu

An Optical Seismometer without Force Feedback
Mark Zumberge, Jonathan Berger, Jose Otero, and Erhard Wielandt

On the Composition of Earth’s Short-Period Seismic Noise Field
Keith D. Koper, Kevin Seats, and Harley Benz

Background Noise Characteristics at the IberArray Broadband Seismic Network
J. Díaz, A. Villaseñor, J. Morales, A. Pazos, D. Córdoba, J. Pulgar,
J. L. García-Lobón, M. Harnafi, R. Carbonell, J. Gallart, and TopoIberia Seismic Working Group

Detection of Systematic Errors in Travel-Time Data Using a Minimum 1D Model: Application to Costa Rica Seismic Tomography
V. Maurer, E. Kissling, S. Husen, and R. Quintero

A Crust and Upper-Mantle Model of Eurasia and North Africa for Pn Travel-Time Calculation
Stephen C. Myers, Michael L. Begnaud, Sanford Ballard, Michael E. Pasyanos,
W. Scott Phillips, Abelardo L. Ramirez, Michael S. Antolik, Kevin D. Hutchenson,
John J. Dwyer, Charlotte A. Rowe, and Gregory S. Wagner

P-Wave Back-Azimuth and Slowness Anomalies Observed by an IMS Seismic Array LZDM
Chunyue Hao and Zhong Zheng

Polarization Analysis in the Discrete Wavelet Domain: An Application to Volcano Seismology
L. D’Auria, F. Giudicepietro, M. Martini, M. Orazi, R. Peluso, and G. Scarpato

Tpd, a Damped Predominant Period Function with Improvements for Magnitude Estimation
Mark William Hildyard and Andreas Rietbrock

The Influence of Maximum Magnitude on Seismic-Hazard Estimates in the Central and Eastern United States
Charles S. Mueller

Geometric Spreading Functions and Modeling of Volcanic Zones for Strong-Motion Attenuation Models Derived from Records in Japan
John X. Zhao

2D Analysis of Earthquake Ground Motion in Haifa Bay, Israel
Zohar Gvirtzman and John N. Louie

Ground-Motion Prediction Equations for Hawaii from a Referenced Empirical Approach
Gail M. Atkinson

Nonlinear Soil Behavior Observed at Vertical Array in the Kashiwazaki-Kariwa Nuclear Power Plant during the 2007 Niigata-ken Chuetsu-oki Earthquake
Hidenori Mogi, Santa Man Shrestha, Hideji Kawakami, and Shinya Okamura

Statistical Validity Control on SPAC Microtremor Observations Recorded with a Restricted Number of Sensors
M. Claprood and M. W. Asten

Site-Specific and Spatially Distributed Ground-Motion Prediction of Acceleration Spectrum Intensity
Brendon A. Bradley
Effect of Vibrating Buildings on Free-Field Motion and on Adjacent Structures: The Bonefro (Italy) Case History  
Giovanna Laurenzano, Enrico Priolo, Maria Rosaria Gallipoli, Marco Mucciarelli, and Felice C. Ponzo

Short Notes

Moderate Earthquake Ground-Motion Validation in the San Francisco Bay Area  
Ahyi Kim, Douglas S. Dreger, and Shawn Larsen

Nonlinear Behavior of Strong Surface Waves Trapped in Sedimentary Basins  
Norman H. Sleep

Scattering and Intrinsic Attenuation of Short-Period S Waves in the Gyeongsang Basin, South Korea, Revealed from S-Wave Seismogram Envelopes  
Based on the Radiative Transfer Theory  
Won Sang Lee, Sukyoung Yun, and Ji-Young Do

Segmentally Iterative Ray Tracing in Complex 2D and 3D Heterogeneous Block Models  
Tao Xu, Zhongjie Zhang, Ergen Gao, Guoming Xu, and Lian Sun

Lg Attenuation in a Region with Both Continental and Oceanic Environments  
Tae-Kyung Hong

Earthquake Source Scaling: m1 versus Other Magnitude Scales  
Shengzao Chen

Assessment of Regional-Distance Location Calibration Using a Multiple-Event Location Algorithm  
Megan L. Anderson and Stephen C. Myers

Mapping the η-Value and the Test Results on the Hyper-Gutenberg–Richter Relation for Microseismicity around the Japanese Islands  
Yoshiki Tsukakoshi

The Vallo di Diano Fault System: New Evidence for an Active Range-Bounding Fault in Southern Italy Using Shallow, High-Resolution Seismic Profiling  
Pier Paolo Bruno, Luigi Improta, Antonio Castiello, Fabio Villani, and Paola Montone

An Investigation into the Seismic Potential of the Irrawaddy Region, Northern Sunda Arc  
Bhaskar Kundu and V. K. Gahalaut

Comments and Replies

Comment on “Is There a Basis for Preferring Characteristic Earthquakes over a Gutenberg–Richter Distribution in Probabilistic Earthquake Forecasting” by Tom Parsons and Eric L. Geist  
Jens-Uwe Klügel

Reply to “Comment on ‘Is There a Basis for Preferring Characteristic Earthquakes over a Gutenberg–Richter Distribution in Probabilistic Earthquake Forecasting?’ by Tom Parsons and Eric L. Geist” by Jens-Uwe Klügel
