

Become a member of **SSA** !

Membership includes so many great benefits:

- Full online access to *BSSA* and *SRL*, including archives dating back to the early 1900's
- Discounted registration to the Annual Meeting, the leading forum for international seismological research
- An international network of seismologists and engineers
- Access to years of presentations from previous Annual Meetings
- Eligibility for our travel grants, honors, and so much more

First organized during the aftershocks of the 1906 San Francisco earthquake, the Seismological Society of America has become the premier forum for assembling, exchanging and sharing the knowledge essential for an earthquake-aware world.

As a member, you'll have access to world-class scientific research and professional development opportunities. Your membership helps SSA communicate earthquake science to the public and provide sound science on seismic risk to government and industry officials.

By joining SSA you are becoming part of an international society that brings together basic research, applied science and public policy in one dynamic community.

To become a member of SSA and join other scientists and engineers in providing a strong voice for seismology, please visit <https://www.seismosoc.org/membership/>.

When you join
SSA you are joining
other scientists and
engineers in furthering our
knowledge of seismology
for the benefit
of society.

INFORMATION FOR CONTRIBUTORS

The *Bulletin of the Seismological Society of America* is a peer-reviewed journal inviting original research and review papers in seismology, including investigation of specific earthquakes, theoretical and observational studies of seismic waves, inverse methods for determining the structure of the Earth or the dynamics of the earthquake source, seismometry, earthquake hazard and risk estimation, seismotectonics, and earthquake engineering. Special issues focus on important earthquakes or rapidly changing topics in seismology. Papers submitted to *BSSA* must be original, unpublished, and not under consideration for publication elsewhere. Membership in the Seismological Society of America is not a requirement for submission to *BSSA*.

Types of Papers

Contributed Articles present the methods, results, and significance of original research. Articles make up the majority of the papers published in *BSSA*.

Short Notes present original research that is limited in scope. A short note should be well focused, concise, and no more than six journal pages in length.

Review Articles present an overview and evaluation of the existing knowledge and thereby provide useful guides to future research. Authors should contact the Editor-in-Chief before preparing and submitting a review article.

Comments and Replies are encouraged by *BSSA*. Comments on papers published in the journal, and replies to those comments, provide an open discussion of research issues that can benefit the entire seismological community.

Electronic Supplements

Authors are encouraged to submit digital material to supplement their articles. The online material must

be supplemental; that is, papers published in *BSSA* must be complete without the electronic supplements. High-resolution graphical information, animations of time-sequenced observations or simulations, and three-dimensional data models are especially appropriate as electronic supplements. We will also consider other forms of digital material, including documented source code used to generate results presented in an article. Detailed guidelines on the preparation and submission of supplemental material are available at <https://www.seismosoc.org/publications/bssa/author-information/bssa-submission-guidelines/>.

Page-Charge Policy

The Seismological Society of America requests that institutions supporting research share in the cost of publicizing the results of that research. Current charges are available at <https://www.seismosoc.org/publications/journal-publication-charges/>. The Editor-in-Chief has the discretion of granting a full or partial waiver of charges for authors who do not have institutional support. Articles with waived page charges cannot have color figures in the printed journal.

Preparation of Manuscripts

Guidelines for the preparation of manuscripts are available at <https://www.seismosoc.org/publications/bssa/author-information/>.

Submission of Manuscripts

Manuscripts must be submitted through *BSSA*'s online-submission system at <http://bssa.edmgr.com>. Guidelines for submission are available at <https://www.seismosoc.org/publications/bssa/author-information/bssa-submission-guidelines/>
