ON THE COVER

Photograph shows a residential building in Hualien, Taiwan, that tilted after the first floor collapsed in the M_w 6.4 earthquake of 6 February, 2018. The paper by Yamada *et al.* in this issue assesses the degree to which amplification by shallow sediments contributed to the damaging ground motions in the city.

Unification of Different Approaches to Probabilistic Seismic Hazard Analysis <i>Jorge L. Alamilla, José A. Rodriguez, and Rossana Vai</i>	2816
Conditional Ground-Motion Model for Damaging Characteristics of Near-Fault Ground Motions Based on Instantaneous Power <i>Esra Zengin and Norman Abrahamson</i>	2828

MAILING & SUBSCRIPTION INFORMATION

Subscriptions to the *Bulletin of the Seismological Society of America (BSSA)*: Information regarding institutional subscriptions can be found at www.seismosoc.org/subscriptions. Eligible members of the Seismological Society of America receive online access to *BSSA*. Individuals may apply for membership or determine eligibility by visiting www.seismosoc.org.

Bulletin of the Seismological Society of America (BSSA) is the premier journal of advanced research in earthquake seismology and related disciplines. It first appeared in 1911. Each issue is composed of scientific papers on the various aspects of seismology, including investigation of specific earthquakes, theoretical and observational studies of seismic waves, inverse methods for determining the structure of the Earth or the dynamics of the earthquake source, seismometry, earthquake hazard and risk estimation, seismotectonics, and earthquake engineering. Special issues focus on important earthquakes or rapidly changing topics in seismology.

BSSA (ISSN 0037-1106) is published bimonthly in February, April, June, August, October, and December by the Seismological Society of America, 400 Evelyn Avenue, Suite 201, Albany, CA 94706-1375. Periodicals postage paid at Berkeley, California and at additional mailing offices.
