CONTENTS

Carbon dioxide storage potential for the Queenston Formation near the AES Cayuga coal-fired power plant in Tompkins County, New York
Kathryn L. Tamulonis, Teresa E. Jordan, and Brian Slater ........................................ 1

The critical role of monitoring, verification, and accounting for geologic carbon dioxide storage projects
Sean I. Plasynski, John T. Litynski, Howard G. McIlvried, Derek M. Vikara, and Rameshwar D. Srivastava .............................................................. 19

Diagenesis and sealing capacity of the middle Tuscaloosa mudstone at the Cranfield carbon dioxide injection site, Mississippi, U.S.A.
Jiemin Lu, Kitty Milliken, Robert M. Reed, and Susan Hovorka ...................................... 35

DISCUSSION & REPLY

Comment on the “Hypothesis for the role of toxin-producing algae in Phanerozoic mass extinctions based on evidence from the geologic record and modern environments”
Martin R. Smith ............................................................ 55

“Hypothesis for the role of toxin-producing algae in Phanerozoic mass extinctions based on evidence from the geologic record and modern environments”
James W. Castle and John H. Rodgers Jr. .................................................. 58

REGULAR FEATURES

Staff Editors ............................................................................................................. ii
President’s Column ............................................................................................... iii
Instructions to Authors ...................................................................................... iv
Electronic Submission Guidelines ...................................................................... 18
DEG Membership Application .............................................................................. 54
2011 Annual Convention Preview .................................................................... 61

ACKNOWLEDGMENTS—
The AAPG Division of Environmental Geosciences thanks KeyLogic Systems, The Bureau of Economic Geology, University of Texas at Austin, Cornell University, Department of Earth & Atmospheric Sciences, and the AAPG Foundation for financial support of this issue of Environmental Geosciences.
