Widespread seawater circulation in 18–22 Ma oceanic crust: Impact on heat flow and sediment geochemistry

Thomas Kuhn, G.J.M. Versteegh, H. Villinger, I. Dohrmann, C. Heller, A. Koschinsky, N. Kaul, S. Ritter, A.V. Wegorzewski, and S. Kasten
Geology, v. 45, p. 799–802, <https://doi.org/10.1130/G39091.1>

On page 801, right column, lines 3–4, the paper reads: “...impedance values between $1 \times 10^{-15} \text{ m}^{-1}$ (pure siliceous ooze) and $1 \times 10^{-16} \text{ m}^{-1}$ (pure pelagic clay; Spinelli et al., 2004)...”.

The values reported there are in error; the correct values are $1 \times 10^{15} \text{ m}^{-1}$ (pure siliceous ooze) and $1 \times 10^{16} \text{ m}^{-1}$ (pure pelagic clay).
