Figure S2. Plots of topographic profiles measured across fault scarps in this study. Profiles are labeled by fault name, and organized from north to south. Profiles were measured in the field with high precision RTK receivers; Six profiles (JM_5_01_2014-1 and JM_5_01_2014-8 on JMFZ; profile LV 4_22_2010-1B on LVFZ; profile LV 4_22_2010-2A on LVFZ) were measured from 10 m DEM (NED) data from USGS, and two (SRR_AM_3-3 and SRR_AM_9-10) were measured in the field with a total station by A.M. Michetti (written commun., 2001).
