

Triple Oxygen Isotope Geochemistry

86 *Reviews in Mineralogy and Geochemistry* 86

TABLE OF CONTENTS

1	Why Measure ¹⁷O? Historical Perspective, Triple-Isotope Systematics and Selected Applications	
	<i>Martin F. Miller, Andreas Pack</i>	
INTRODUCTION		1
Non-mass-dependent oxygen triple-isotope distributions		3
Non-mass-dependent oxygen triple-isotope distributions generated by processes not involving photochemical reactions		5
OXYGEN TRIPLE-ISOTOPE SYSTEMATICS		6
Experimental measurements of $\ln(^{17/16}\alpha)/\ln(^{18/16}\alpha) = \theta$		8
Defining and quantifying deviations from a reference fractionation relationship		8
REFERENCE MATERIALS AND STANDARDS		12
¹⁶ O, ¹⁷ O AND ¹⁸ O ABUNDANCES AND ISOTOPE RATIO RANGES IN NATURALLY OCCURRING TERRESTRIAL MATERIALS		15
Oxygen triple-isotope measurements of atmospheric O ₂		15
Oxygen triple-isotope measurements of terrestrial silicates		16
Oxygen triple-isotope distributions in meteoric waters, snow and ice cores		18
STANDARDIZING $\Delta^{17}\text{O}$ DATA FROM ROCKS AND MINERALS		20
SOME EXAMPLES OF THE APPLICATION OF OXYGEN TRIPLE-ISOTOPE RATIO MEASUREMENTS		21
Corrections to $\delta^{13}\text{C}$ measurements of CO ₂		22
Comparisons of the oxygen triple-isotope compositions of the Earth and Moon		22
Investigating the climate of ‘Snowball Earth’ from hydrothermal rocks		24
Insights from $\Delta^{17}\text{O}$ measurements on basalts, shales and fluvial sediments		25
Quantifying gross photosynthetic oxygen production in the oceans		26
Oxygen triple-isotope ratios in bio-apatite: a proxy for CO ₂ partial pressure in paleo atmospheres		26
CONCLUSIONS AND OUTLOOK		27
ACKNOWLEDGEMENTS		28
REFERENCES		28

7 Isotopic Traces of Atmospheric O₂ in Rocks, Minerals, and Melts

Andreas Pack

INTRODUCTION	217
THE ISOTOPE COMPOSITION OF THE ATMOSPHERE	217
Modern air O ₂	217
Why is the reconstruction of the $\Delta^{17}\text{O}$ of air O ₂ from rocks interesting?	220
AIR–ROCK INTERACTION	220
Meteorite fusion crust	220
Cosmic spherules	222
From air to sulfates and beyond	224
Deep sea manganese nodules	225
Tektites	227
Air inclusions in tektite glasses	231
Skeletal apatite and eggshell carbonate	232
High temperature technical products	232
Using $\Delta^{17}\text{O}$ as a new tool to distinguish synthetic and natural gems	234
CONCLUSIONS	236
ACKNOWLEDGEMENTS	236
REFERENCES	236

8 Triple Oxygen Isotopes in Evolving Continental Crust, Granites, and Clastic Sediments

Ilya N. Bindeman

INTRODUCTION	241
Shales, what do they reflect?	242
Shales, granites and continental crust growth	246
PART I: TRIPLE OXYGEN ISOTOPES IN WEATHERING PRODUCTS FROM MODERN AND RECENT ENVIRONMENTS	248
Weathering reactions and stable isotopic parameters	248
Using triple oxygen isotopes in weathering products to estimate T and $\delta^{18}\text{O}_w$ values	249
Computing the weathering product	253
Weathering in different climate regions	253
Effects of diagenesis on $\delta^{18}\text{O}$ and $\Delta^{17}\text{O}$ in shales	255
Effects of metamorphism and anatexis on $\delta^{18}\text{O}$ and $\Delta^{17}\text{O}$	260
PART II: SHALES ACROSS THE GEOLOGIC HISTORY	261
Overview of temporal trend of $\delta^{18}\text{O}$ and $\Delta^{17}\text{O}$ and Archean vs. post Archean shales	261
The Phanerozoic shale record	266

PART III: THE TRIPLE OXYGEN ISOTOPE ANALYSIS OF GRANITES IN COMPARISON WITH SHALES RECORD: INSIGHT INTO THE EVOLUTION OF THE CONTINENTAL CRUST AND WEATHERING.....	268
Comparing coeval record of Archean granites and shales.....	274
Post-Archean granites and shales	277
Alternative testable hypotheses of Archean–Proterozoic $\Delta^{17}\text{O}$ transition	278
PART IV. SEDIMENTARY PROXIES SHOWING TEMPORAL $\Delta^{18}\text{O}$ INCREASE	279
SUMMARY: DEFINING THE $\Delta^{17}\text{O}$ CRUSTAL ARRAY	283
ACKNOWLEDGEMENTS	284
REFERENCES	284

Triple Oxygen Isotope Variations in Earth's Crust

Daniel Herwartz

INTRODUCTION	291
GUIDING PRINCIPALS	292
Definitions, reference frames and the significance of TFL's, MWL's and θ	293
Mass dependent isotope fractionation in triple oxygen isotope space	295
Mixing	298
QUANTIFYING FRACTIONATION FACTORS	301
The two directional approach	301
The three-isotope method.....	302
Isotope thermometry and geospeedometry.....	303
WATER–ROCK INTERACTION.....	304
Constraining input variables for the water–rock mass balance equation	305
Constraining the isotopic composition of pristine (paleo-) fluids	307
Resolving the $\delta^{18}\text{O}$ composition of snowball Earth glaciers	307
Resolving the $\delta^{18}\text{O}$ composition of ancient seawater	310
RESOLVING INDIVIDUAL PROCESSES	311
Boiling and phase separation observed in well fluids	311
Assimilation of low $\delta^{18}\text{O}$ rocks.....	311
Isotopic exchange with CO_2 and SO_2	313
Decarbonation.....	313
Dehydration	313
Alteration.....	314
CONCLUSIONS AND OUTLOOK.....	315
ACKNOWLEDGEMENTS	316
REFERENCES	316

10 Triple Oxygen Isotope Trend Recorded by Precambrian Cherts: A Perspective from Combined Bulk and in situ Secondary Ion Probe Measurements

D.O. Zakharov, J. Marin-Carbonne, J. Alleon, I.N. Bindeman

INTRODUCTION	323
PART I: PRECAMBRIAN CHERTS AS AN ARCHIVE OF ANCIENT SILICA CYCLE	326
The collection of early Precambrian cherts	328
Silica precipitation and diagenesis, and the effect of oxygen isotopes	332
Triple oxygen isotopes in silica	334
Secondary ion mass spectrometry	336
Raman spectroscopy	337
PART II: COMBINED SIMS AND	
TRIPLE OXYGEN ISOTOPE ANALYSIS OF PRECAMBRIAN CHERTS	338
Methods	339
Results	341
Discussion: various origins of Precambrian cherts and record of seawater	343
Triple oxygen isotope evolution of seawater	352
FUTURE DIRECTION AND CONCLUSIONS	355
ACKNOWLEDGEMENTS	357
REFERENCES	357

11 Triple Oxygen Isotopes in Silica–Water and Carbonate–Water Systems

Jordan A.G. Wostbrock, Zachary D. Sharp

INTRODUCTION	367
MINERAL–WATER OXYGEN ISOTOPE THERMOMETERS	368
¹⁸ O/ ¹⁶ O fractionation	368
Triple oxygen isotope fractionation	370
Equilibrium triple oxygen isotope fractionation—the $\Delta^{17}\text{O}$ – $\delta^{18}\text{O}$ plot	371
KINETIC EFFECTS RESULTING IN OXYGEN ISOTOPE DISEQUILIBRIUM	372
Disequilibrium effects with dissolved inorganic carbon	373
Application to the triple oxygen isotope system	374
SILICA–WATER FRACTIONATION	376
Calibration of the triple oxygen isotope silica–water thermometer	376
Silica in the terrestrial environment	377
CARBONATE–WATER FRACTIONATION	378
Analytical method	378
Triple oxygen isotope fractionation in the calcite (aragonite)–water system	379
Applications to natural marine samples	381
CONSIDERATIONS NECESSARY TO INTERPRET ANCIENT SEDIMENTS	382
Modelling changing ocean composition in the past	384
Modelling triple oxygen isotope trends during diagenesis	385
Application to carbonate and silica sediments	388

TRIPLE OXYGEN ISOTOPES OF COEXISTING QUARTZ AND CALCITE.....	393
CONCLUSION.....	395
ACKNOWLEDGEMENTS	395
REFERENCES	395

12 Triple Oxygen Isotope Systematics in the Hydrologic Cycle

Jakub Surma, Sergey Assonov, Michael Staubwasser

INTRODUCTION	401
Analysis	402
New data presented in this work.....	403
TRIPLE OXYGEN ISOTOPES IN WATER	404
Triple oxygen isotope fractionation.....	404
¹⁷ O-excess during the formation of vapor.....	404
NATURAL VARIATIONS OF ¹⁷ O-EXCESS IN WATER.....	405
Meaning and purpose of the Global Meteoric Water Line	405
¹⁷ O-EXCESS DISTRIBUTION IN ATMOSPHERIC VAPOR.....	412
FUTURE WORK AND CONCLUSION.....	420
Future work	420
Conclusion.....	422
ACKNOWLEDGEMENTS	423
REFERENCES	423

13 Triple Oxygen Isotopes in Meteoric Waters, Carbonates, and Biological Apatites: Implications for Continental Paleoclimate Reconstruction

Benjamin H. Passey and Naomi E. Levin

INTRODUCTION	429
METEORIC WATERS.....	430
Evaporation from the oceans.....	430
Rayleigh distillation and the triple oxygen isotope meteoric water line	432
Evaporation from isolated bodies of water.....	434
Closed-basin and throughflow lakes.....	435
Special considerations and case studies	438
ANIMAL AND PLANT WATERS.....	441
Prospects for reconstructing $\Delta^{17}\text{O}$ of past atmospheric O_2	446
Plant waters	446
ANALYSIS OF CARBONATES AND BIOAPATITES.....	449
Conversion methods	449
Exchange methods.....	451
Other methods	452

Interlaboratory reproducibility	453
Fractionation exponents for carbonate–water equilibrium, and acid digestion	454
FUTURE DIRECTIONS AND CONCLUDING REMARKS	455
ACKNOWLEDGEMENTS	457
REFERENCES	457

14

Small Triple Oxygen Isotope Variations in Sulfate: Mechanisms and Applications

Xiaobin Cao, Huiming Bao

INTRODUCTION	463
TRIPLE OXYGEN ISOTOPE SYSTEM	465
SULFOXYANIONS–WATER OXYGEN ISOTOPE EXCHANGE	466
Sulfate–water system	466
Sulfite–water system	466
Thiosulfate–water system	468
MICROBIAL SULFATE REDUCTION (MSR)	468
SULFIDE OXIDATION MECHANISMS	469
Thiosulfate oxidation on pyrite surface	469
Sulfite oxidation by O ₂ in solution	471
Sulfite oxidation by Fe ³⁺ in solution	472
The role of microbes on oxygen isotope composition of sulfate derived from sulfur oxidation	473
Comments on laboratory experiments	475
Constraining intrinsic equilibrium and kinetic oxygen isotope effects during sulfide oxidation	476
APPLICATIONS	477
Predicted sulfate δ ¹⁸ O and small Δ ¹⁷ O	477
Lake sulfate	479
Riverine sulfate	480
ANALYTICAL METHODS	481
FUTURE OPPORTUNITIES	482
ACKNOWLEDGEMENTS	483
