Seismological Research Letters

*Seismological Research Letters (SRL) is published bimonthly by the Seismological Society of America. SRL is a unique journal—the first to serve as a general forum for informal communication among seismologists, as well as between seismologists and those nonspecialists interested in seismology and related disciplines.

The contents of SRL include contributed articles on topics of broad seismological and earthquake engineering interest, opinion pieces on current seismological topics, news and notes about seismology and seismologists in the U.S. and internationally, special earthquake reports, the Electronic Seismologist and EduQuakes columns, strong motion network reports, equipment news, and letters to the editor. A special section in SRL for the Eastern Section of the Seismological Society of America focuses on eastern North American seismology. Abstracts of papers to be presented at the Annual Meeting of the Seismological Society of America and the annual meeting of the SSA Eastern Section also appear in SRL, as does the annual roster of members of the Society.

The subscription rate for North American institutions is $103*; for countries outside North America the rate is $113*. Subscription rates include normal shipping; for air mail delivery outside the U.S. please include an additional payment of $25.

Note: Subscribers to both SRL and our sister publication Bulletin of the Seismological Society of America (BSSA) are eligible for a combined discounted rate if both are ordered together. See below for combined rate information.
