The Seismological Society of America (SSA) is a scientific society devoted to the advancement of earthquake science. Founded in 1906 in San Francisco, the Society now has members throughout the world representing a variety of technical interests: seismologists and other geophysicists, geologists, engineers, insurers, and policymakers in preparedness and safety.

SEISMOLOGICAL SOCIETY OF AMERICA
ITS OBJECT

I
Promote research in seismology, the scientific investigation of earthquakes and related phenomena.

II
Promote public safety by all practical means.

III
Enlist the interest of engineers, architects, contractors, insurers, and property owners in the obligation to protect the community against disasters due to earthquakes and earthquake fires by showing that it is reasonably practicable and economical to build for security.

IV
Inform the public by appropriate publications, lectures, and other means to an understanding of the fact that earthquakes are dangerous chiefly because we do not take adequate precautions against their effects, whereas it is possible to insure ourselves against damage by proper studies of their geographic distribution, historical sequence, activities, and effects on buildings.
Special Focused Issue:

The 22 February 2011 Magnitude 6.2 Christchurch Earthquake
