Special section: Marine and seabed technology

386........Introduction to this special section: Marine and seabed technology, S. Ronen

394........Passive acoustic monitoring (PAM) field trial during two wide-azimuth geophysical surveys, C. Barousse, T. Rooney, B. Padovani, R. Snyder, A. Unietis, and R. Wyatt

398........A large-scale validation of OBN technology for time-lapse studies through a pilot test, deep offshore Angola, J.-L. Boelle, E. Brechet, E. Ceragioli, R. Nawab, D. Lecerf, and A. Liquefr

406........Throwing a new light on time-lapse technology, metrics and 4D repeatability with SDR, J. Cantillo

416........Directions in ocean-bottom surveying, R. de Kok

430........Estimates of the anomaly threshold in controlled-source electromagnetics, I. Filina, V. Ball, S. Morton, S. Terentyev, K. Prindle, and M. McCalla

436........To CSEM or not to CSEM? Feasibility of 3D marine CSEM for detecting small targets, M. Frenkel and S. Davydycheva

448........Field appraisal and accurate resource estimation from 3D quantitative interpretation of seismic and CSEM data, J. Morten, F. Roth, S. Karlsen, D. Timko, C. Pacurar, P. Olsen, A. Nguyen, and J. Gjengedal

458........Decimation test on an ocean-bottom node survey: Feasibility to acquire sparse but full-azimuth data, B. Olofsson, P. Mitchell, and R. Doychev

472........OTC. 12 offers full program of offshore technology, C. Knobloch

---

**Deliver confident reserves estimates**

Test the limits of all your key parameters; accurately assess structural complexity, stratigraphic features, fluid contacts, and property distributions—in one application.

Deliver confident decisions—with Petrel* software.
